

CEDALO

Process Sheets: Modelling, Simulation and Operation of Message-Queue based IoT and Industry 4.0 Systems

New: Process Sheets for MQTT

- End-user-friendly, interactive modeling technology
- No scripts or algorithm development necessary
- Support for distributed, autonomous and asynchronous processes
- Seamless connection of technical and commercial. Processes
- Secure inter-company process networking
- Based on MQTT Message Broker and MQTT Message Queue
- Interface bridges for OPC UA, CoAP, DDS, AMQP and IO Link

Industrie 4.0 for SME

- Smooth integration into existing infrastructures
- Suitable for small and medium-sized enterprises (SMEs)
- Support for AWS IoT, Microsoft Azure, IBM Watson IoT
- Simulation of non-existing sensors and machines
- Security through 256-bit Public-Private Key Encryption
- Cloud service or on-premise installation
- Pay-per-Transaction price model (without initial costs)
